I'm a PC technician with knowledge focused on programming and web development. I would like to collaborate as a web developer in a teamwork for providing solutions, benefits and contribute to projects that accomplish customers needs and giving an excellent user experience in UI and UX. Furthermore, I work with MERN stack using the latest technologies features and good practices for achieving the best performance in web applications and pages.

Projects

📎 Avatar maker
Web application designed for creating and personalization of avatars, created with HTML5, CSS and JavaScript (ES6).

📎 PicVerse
Web application that connects to NASA'S APOD API for visualizing daily space related photos and gives information about. Have a user-friendly interface which users can search pics by day, configure resolution and get a brief description about picture.

📎 Blog – Análisis Instrumental
Blog project about "Análisis instrumental" university course which stores all activities and media created and used during classes. It has developed using HTML5, SASS and JS, PHP for backend and MySQL for database.

📎 Traveller
Bus booking full-stack SPA built with TypeScript and React with an API connection to a SQL database (MariaDB). Built for searching and booking bus trips with a user-friendly interface.

Certifications

FreeCodeCamp
Responsive Web Design

JavaScript Algorithms and Data Structures

Back End Development and APIs
